

Capability Statement

Structural steel fabrication, supply and installation.
Sydney-based. Australia-wide.

Built on 15+ years of industry experience

National Steel Structures (NSS) brings over 15 years of structural steel industry experience to projects across Australia. Based in Sydney, our team has worked on a wide range of jobs across different sectors, bringing practical knowledge and a hands-on understanding of steel construction.

From fabrication to installation

NSS delivers structural steel fabrication, supply and installation. We support clients with steelwork that connects workshop preparation, delivery and on-site erection, with a focus on quality workmanship and efficient project delivery.

■ Structural steel fabrication

Fabrication of structural steelwork for construction projects, including building frames, beams, columns and associated steel components.

■ Structural steel supply

Supply of structural steel packages to project locations across Australia, supporting the transition from fabrication to site installation.

■ Structural steel installation and erection

On-site assembly and erection of structural steelwork, bringing together the steel package with attention to accuracy, sequencing and safe work practices.

National Steel Structures Pty Ltd

Steelwork from workshop to site

Practical capability across fabrication, supply and erection.

Structural steel fabrication

Quality steelwork begins with careful preparation and attention to detail. NSS provides structural steel fabrication for project requirements, focusing on accurate components, sound workmanship and readiness for installation.

■ Project-specific steelwork

Structural steel frames, beams, columns and supporting members produced for the steelwork requirements of each project.

■ Fabrication with installation in mind

A practical approach to component preparation and connections that considers how the steelwork will be delivered, assembled and erected on site.

Structural steel installation

Our installation capability is grounded in hands-on steel construction experience. NSS brings a practical understanding of assembly, site sequencing and the coordination needed to turn fabricated components into a completed structure.

■ Assembly and erection

Installation of structural steel members and frames, with attention to positioning, alignment, connections and the progression of the steelwork.

■ Coordination on site

Working alongside builders and other trades to support access, delivery sequencing and an organised installation process.

Australia-wide delivery

Sydney is our base; Australia is our service area. NSS supplies and installs structural steel nationally, supporting clients whose projects require a steelwork partner beyond their local area.

Experience across varied projects

Our team has completed a wide range of jobs across different sectors. That breadth of experience helps us respond to varied steelwork requirements, site conditions and construction programmes.

Experience. Workmanship. Delivery.

A practical steelwork partner for your next project.

Why choose National Steel Structures?

NSS combines structural steel industry experience with fabrication, supply and installation capability. Clients benefit from a team that understands both the steelwork and the practical demands of construction.

- **15+ years of industry experience**

Hands-on knowledge gained across a wide range of jobs and sectors, bringing practical judgement to varied project requirements.

- **Quality workmanship**

A focus on the detail that matters: careful fabrication, accurate assembly and attention to the finished steelwork.

- **Efficient project delivery**

An organised approach to fabrication, supply and installation that recognises the importance of construction programmes and coordination on site.

- **Safety-focused approach**

Safe work practices and awareness of site conditions are central to responsible steel installation and erection.

- **Direct communication**

A straightforward point of contact for your steelwork enquiry, with clear communication about your project and the services NSS can provide.
